Have you ever heard of Human Respiratory Syncytial Virus (hRSV)?

- hRSV leads to life threatening issues:
  - Severe Lung Infection
  - Bronchiolitis
  - Pneumonia
- Easily mistaken for the flu
- High Risk groups: Premature infants, young children, adults 65 or older, those with weakened immune systems (HIV, chemotherapy, chronic-illnesses etc.)
- No vaccine currently in the market

Are you putting your child in danger?

Parents may survive hRSV, but can infect their children with the virus
